Bibliometrics: Downloads (6 Weeks): 8, Downloads (12 Months): 49, Citation

Network operators gradually open their interfaces to formerly hidden services, which fosters the development of a new class of mobile applications that take context information such as the location of users. However, the development of location-based ...

Scarce radio resources and the ambition to increase the number of mobile services that can be guaranteed a quality of service are pushing mobile communication systems from non-service convergent 2G and convergent-service 2.5G and 3G wireless networks towards service convergent 4G networks.

3 [Integrating heterogeneous wireless technologies: a cellular aided mobile network \(CAMA\)](#)

[Bharat Bhargava, Xiaoxin Wu, Yi Lu, Weichao Wang](#)

August 2004 **Mobile Networks and Applications**, Volume 9 Issue 4

Publisher: Kluwer Academic Publishers

Bibliometrics: Downloads (6 Weeks): 9, Downloads (12 Months): 65, Citation

A mobile ad hoc network is a collection of wireless terminals that can be deployed in a dynamic environment. Its deficiencies include limited wireless bandwidth efficiency, low throughput, delays, and weak security. Integrating it with a well-established cellular network can improve its performance.
